## **Extension of HEITEC's HeiCase Family Custom maxi versions available up to 30 U**

**Eckental, 3<sup>th</sup> October 2016** – With immediate effect, the electronics division of HEITEC AG offers the opportunity to receive customized versions of its successful modular HeiCase standard enclosures family (formerly RiCase) featuring a height of up to 30U and a depth of up to 900mm. In consequence, these variants are particularly suitable for packaging-intensive applications with a lot of electronics or as a mobile “cabinet replacement” which, in comparison with conventional solutions, has numerous advantages:

Thanks to their construction consisting of individual, interconnected extrusions, the large variations provide also high stability and are not only scalable in height but also in depth (up to 900mm) in increments of 120mm. If desired, they can be assembled on wheels and equipped with specific handles for mobile applications. Therefore, the cabinet is extremely mobile and flexibly usable despite its substantial dimensions – for example, the handles are tested up to 100kg and suitable for heavy duty deployment. In addition, the chassis design can be seamlessly adapted to the corporate design of the customer. The decorative elements (corner panels and plastic parts) of the “Maxi” can be designed in RAL colours upon request. Furthermore, even the system chassis can now be made available in the colour of choice.

Just like the already proven standard enclosures of the HeiCase family, the new, customized Maxi versions meet all the requirements for robust desktop and system housing with scalable interior and exterior assembly due to their stable structure, and, based on a comprehensive range of accessories, they can be adapted easily to all kinds of conditions. Due to their modularity, their elements can be combined with a variety of items of different materials, i.e. front or rear panels of Plexiglas a.o. An additional advantage is that the enclosures can be supplied lockable.

That's why the HeiCase Maxi version is an ideal and extremely stable housing solution for systems with extensive electronics, which still must be flexible and movable or need to feature an attractive appearance.

### **Company Profile**

HEITEC represents industry expertise in automation and electronics and offers solutions, products and services in the field of software, mechanics and electronics.

In early 2013, HEITEC took over the complete electronics packaging systems line from RITTAL and with it, the development, manufacturing and sales of all standard articles and customer-specific solutions.

Over 2000 customers increase their productivity and optimize their products with the help of HEITEC's state-of-the-art, reliable and economic system solutions.

A work force of 1000 employees at numerous sites worldwide provides high-quality industry skills close to the customer. More than 60 % of HEITEC's employees hold a graduate or postgraduate degree in technology.

During the last years HEITEC has grown at an average rate of 10 % - almost doubling its turnover within six years.
